PROFILE

Second-year Computer Science student at Queen's University Belfast (Year 1: 67.5%, 2:1) seeking a 9–12 month placement from summer 2027. Motivated by software that tackles real public problems, from a food aid distribution system modelled on World Food Programme data to a climate education game in progress. Developed a solo Java booking engine end to end and currently extending into cloud through AWS Cloud Practitioner training.

Right to work: UK Student visa (valid to October 2029). The placement year is part of the degree, so no visa sponsorship is needed.

EDUCATION

Queen's University Belfast — BSc (Hons) Computer Science with Professional Experience 2025 – 2029 (expected)
Year 1: 67.5% (2:1) · Queen's Excellence Award (awarded for achieving above 60%)

Year 1 modules: Introduction to Cyber Security 77 · Object-Oriented Programming 73 · Introduction to Computer Architecture 73 · Fundamentals of Maths for Computing 63 · Data Driven Systems 63 · Procedural Programming 56

Year 2 modules: Software Engineering and Systems Development · Data Structures and Algorithms · Systems Security and Cryptography · Theory of Computation · Professional and Transferable Skills

QUB International Study Centre — Foundation Degree, Science and Engineering 2024 – 2025
English (ELSS): A

International British School Kuwait 2016 – 2024
IGCSEs: Mathematics 8, Physics 7, Computer Science 7, Chemistry 6, English 6 · IELTS 7.5

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript, PHP, HTML, CSS
Tools: Git, GitHub, GitHub Pages, MySQL, Chart.js, Visual Studio Code, Eclipse
Concepts: Object-oriented design, data structures and algorithms, relational database design, CRUD web applications, cyber security fundamentals
Learning: C++ (basic, currently learning through the Data Structures and Algorithms module)

PROJECTS

Food Aid Distribution System — University group project, team of 4 Mar – May 2026
PHP, MySQL, JavaScript, Chart.js · aligned to UN SDG 2 (Zero Hunger)

- Took ownership of the full technical build (database, backend, frontend integration and reporting) within the team, delivering the project on schedule.
- Designed a relational MySQL schema and ER diagram across 6 linked tables with foreign-key constraints and validation checks, modelled on World Food Programme metrics (HungerMap, Vulnerability Analysis and Mapping).
- Built 6 PHP management pages with full create, read, update and delete (CRUD) functionality for regions, organisations, food items, distribution centres, distribution events and event reports.
- Wrote analytical SQL reports on distribution trends across regions and events, visualised with Chart.js, and deployed the system to QUB EEECS hosting.

Airline Booking System — Solo project · Java · github.com/RCS504/airline-booking-system Jul – Aug 2026

- Built a console booking engine covering route listing, flight search, seat maps, booking, cancellation and flight management, with separate model, system and UI layers across 13 Java files.
- Engineered HashMap-based lookups for flight search and seat booking, preventing double-booking and double-cancellation.
- Generated unique 6-character booking references with collision detection via HashMap key lookups.
- Added exception handling and null checks to user input, developing the system incrementally across 27 Git commits.

Personal Portfolio Website — Solo project · HTML, CSS, JavaScript · rcs504.github.io/Portfolio Sep 2026

- Hand-coded without frameworks or templates and deployed on GitHub Pages, showcasing 2 projects.
- Created a custom scroll-snap image carousel with centred slides and peeking neighbours to showcase the Food Aid project.
- Found through manual testing and fixed a bug where the embedded Airline Booking System demo failed to display after being hidden, by reloading it whenever the project is selected.

Educational Climate Game — Software Engineering team project, team of 7 2026 – 2027 (in progress)

- Designed and pitched the core concept for an educational game on UN SDG 13 (Climate Action), adopted by the team.

LEADERSHIP AND VOLUNTEERING

Course Representative, Computer Science — Queen's University Belfast 2025 – 26, reappointed 2026 – 27

- Represent a cohort of around 300 students to academic staff through meetings and email, contributing 15+ hours of representative work in 2025–26, including the 4-hour QUB Student Voice Academic Rep Summit.
- Escalated cohort-wide concerns over a Procedural Programming exam to the Course Director, leading to a review with module owners.
- Raised a gap in published revision guidance ahead of a Computer Architecture final, prompting clarification to the full cohort.

Event Steward (Volunteer) — Growing Up Muslim Conference, Belfast Dec 2025

- Coordinated seating, crowd flow and attendee direction for 1,800 attendees over a 10.5-hour day.

SKILLS PROFILE

- **Problem solving:** Debugging live integration issues and designing defensive logic (null checks, collision checks) in solo projects.
- **Communication:** Written and in-person communication with academic staff on behalf of a 300-student cohort.
- **Teamwork and initiative:** Proposing ideas and taking ownership of delivery in group projects of 4 and 7 people.
- **Time management:** Balancing full-time study with the Course Representative role, volunteering and self-directed learning.

PROFESSIONAL DEVELOPMENT

- AWS Cloud Practitioner Essentials, AWS Skill Builder (in progress).
- Python for Everybody Specialization, University of Michigan via Coursera (5 courses).
- Ongoing Java data structures and algorithms practice: github.com/RCS504/neetcode-submissions

INTERESTS AND LANGUAGES

- **Side projects:** Build projects and practise algorithms outside coursework, from a hand-coded portfolio site to a public Java problem-solving repository.
- **Technology for sustainability:** 2 projects address UN Sustainable Development Goals: SDG 2 (Zero Hunger) and SDG 13 (Climate Action).
- **Languages:** English (fluent), Urdu (native), Punjabi and Hindi (conversational).
